A triple Almanacke for

the yeere of our Lorde God. 1591. being the thirde from the Leape yeere.

Wherein is conteyned, not onely the common accompt, which in this our Realme is vſed, with the Romane Kalender according to the late correction of *Gregorie*: but alſo, the true computation and reduction of the monethes to their firſt & auncient ſeates, Chriſtmas day being at the Sunnes entrance into *Capricorne*, or ſhorteſt day: whereby may eaſely be perceyued the great difference which hath happened for want of due obſeruation of the courſes of Sunne and Moone Referred principally to the Meridian of London and for moſt reſpectes will ſerue for all Englande, and many other countries alſo.

By I.D.

Nil tam occultum quod non reuelabitur.

Faultes escaped in printing.

In the Contentes the thirde collumne, the Golden number, Reade, for. 13. 15.

In March, for △ the 4. day, reade 5 day.

In June, for, The last quarter at. ii. of the clocke, reade. xi. of the clocke.

In Nouember. Reade, The last quarter, the. xxvii. day &c.

In the first page B. of the Prognostication the fourth line, for that, Reade yt.

In the last page of the Prognostication the. 17. lyne, for. 2. houres of the clocke. 29. min. Reade. 1. houre of the clocke. 58. minutes, leauing out, and. 20. secondes.

In the. 19. lyne, for. 24. min. and. 10. secondes. Reade. 2. min. leauing out and. 10. secondes.

1591.

A Prognoſtication *for the ſame yeere* M.D.XCI.

Conteyning a ſhort diſcourſe of the Eclipſe of the Moone, and of the quarters of the yeere, with other neceſſarie Rules, for the better vnderſtanding of the Almanacke going before: wherin are Rules for the finding the planetarie hower very eaſely and pleaſantly, as alſo the riſing and ſetting of the Sunne any day throughout the yeere, referred with the other, to the ſame Meridian.

By J.D.

Deum neſcire eſt nihil intelligere.

Imprinted at London by Richard VVatkins and Iames Robertes.

Cum priuilegio Regiæ Maieſtatis.

A Prognostication

for the same yeere

M. D. XCI.

Conteyning a short discourse of the Eclipse of the Moone, and of the quarters of the yeere, with other necessarie Rules, for the better vnderstanding of the Almanacke going before: wherein are Rules for the finding the planets motion very easily and playnely, as also the finding and listing of the Sunne any day throughout the yeere, referred vnto the other, to the same Meridian.

By T. D.

Imprinted at London by Richard
VVatkins and Iames Roberts.

To his very friende P. L.

ALL the Learned (friende P. L.) agree with one voyce, that CHRIST our Sauiour was conceyued at the Sunnes entraunce into *Aries*, and borne vpon the shortest day, when the Sunne entred into *Capricorne*: wherefore to set Christmas vpon the shortest day, and draw the Kalender backe in proportion thereunto, me thought, was very expedient: and the rather, because of all in generall, a reformation long tyme hath been desired, and a fruition of the Feastes, vpon their ancient times. For considering that the immoueable Feastes ought to keepe the same dayes they vsed to do in euery Moneth before, it of necessitie followeth, that they must be kept at other tymes (in respect of the motions of the Sunne) then for many yeeres they haue done. As for Easter, and the moueable Feastes which folowe the course of the Moone, they were by *Constant. magnus* once corrected: but ignorance of obseruation in continuance of tyme hath bred great errour sithens, in so much as many yeeres they misse their due tymes a moneth at least, and therefore of late haue had a seconde Reformation: which although it be very truely performed for Easter, and it appendances, yet the Mouethes not reuocated to the true degrees of the Sunne, deserued a new aduisemadueriion. And therefore friende P. L. I haue not attempted this, as a newe fangle, and louer of nouelties (the which I haue alwayes hated) but as a furtherer of the trueth, which I alway haue loued. *Vale, et mecum frue.* 4. *Kalendas Aprilis.* 1590.

To the Reader.

IT was my chaunce (curteous Reader) this last Lent, to be in company of diuers, as well Worshipfull as Learned: Amongst whom, vpon occasion of talke geuen, grew sundry argumentes about the true keeping of Ester: and thereupon, as vpon an adiunct and thing appendant thereto, about the reformyng of the Kalender: some maynteyning the old, some the Romish Kalender, corrected by Gregorie, and some impugning them both, as not brought to their due and ancient Periodes: Which Conference had awhyle, pro et con, and apparent manifestation of the truth shewed for a thirde correction to be required, the conclusion was an intreatie of me (who had borne a part amongst them) that at my conuenient leasure, I would attempt the same, against the next yeere, considerynge that of this yeere then was welnigh a quarter spent: which motion made by suche as I could not well denie, and partly that the trueth might appeare, I willingly haue attempted. Beholde therefore a thyrde correction, both true and exacte, wherein (as in the last) none of the immoueable Feastes are altered from their dayes of the monethes they were placed in the olde Kalender. So Ester is appointed to the next Sunday followyng the first full Moone after the Sunnes entraunce into Aries, and the moueable Feastes in proportion to it, and euery aspect satisfied: The which with all other happines, I wysh thee hartely to enioy.

Vale, 14. Aprilis. 1590.

Elections.

IT is good to Purge, the Moone being in the watri trigon, vz. in Cancer, Scorpio, or Pisces.

In Cancer by Electuaries, in Scorpio by Potions, in Pisces by Pilles: And yf neede be, in Libra and Aquarius, which are indifferent for any Purging medicine.

The tymes of the yeere fittest, are the Spring and Harueste: the moyst, Sommer and Winter: the one for it exceding colde, the other for excellive heate.

For letting of Blood.

There are two tymes, { the one of necessitie. / the other by election.

The fyrst is to be vsed out of hand, or els great perill of death may ensue to the partie, as in the Plurisies, and Squinansies.

The latter is to be chosen after the motion of the Moone through the. xii. signes, in this sort.

Let the { Phlegmatike / Melancholik / Chollerike } be let blood the Moone being in

Phlegmatike: { Aries, except in the head. / Sagittari, except in the thighes and hippes. }

Melancholik: { Libra, in the first. 15. degrees, except in the buttockes. / Aquarius, except in ỹ legges. }

Chollerike: { Cancer, except in the brest. / Scorpio, except in ỹ yiuities. / Pisces, except in the feete. }

The Sanguine in any of these.

Minution is prohibited in Leo, for that it is the house of the Sunne, who is alwayes repugnant to the Moone in nature. Also it is prohibited in Gemini, for that commonly the minution is by some Uenes in the armes and handes: and no man ought to touche that member with Iron, which the Moone then gouerneth.

Furthermore, it is good from the change to the fyrst quarter for youth: from the fyrst quarter to the full, for youth and myddle age: from the full to the last quarter, for myddle age and olde age: from

the laſt quarter to the change, for olde age only, according to the verſe,

Luna vetus veteres, iuuenes noua luna requirit.

The Moone in age, the ancient ſort,
Their veynes may open beſt:
The younger ſort tyll Moone be newe,
Muſt let their veynes haue reſt.

Laſt, the age of the partie to be let blood is much to be conſidered: for none before. xiiii. or after. lxx. yeeres, ought to be let blood: the firſt, for ſlendernes of the veynes: the later, for debilitie of nature, vnleſs the olde men be fleſhy, full of blood, and ſtrong.

For Bathing.

The Moone in { Libra or Piſces, for cleanlynes.
Aries, Leo, or Sagittarius, for groſſe bodyes.
Cancer, Scorpio, or Piſces, for dry bodyes.

For ſweatyng, vſe the ſame conſideration which is in bathing.

Cut heare, the Moone in Libra, Sagittarius, Aquarius, or Piſces, and in the encreaſe.

Sow Seedes which you woulde haue to yeelde fruite the ſame yeere, the Moone being in moueable ſignes, as Aries, Cancer, Libra, or Capricorne: it wyll be beſt when ſhe is in Virgo, Capricorne, or Cancer, if ſhe be increaſing in number. The like is to be ſayd of Piſces.

But to plant Trees for continuance, let it be whyleſt ſhe is in Taurus, Leo, or Aquarius.

Fell Tymber from S. Barnabies day in June, tyll the firſt Kalendes of Januarie, in the wane of the Moone.

Fell fire wood, that the ſtocke may ſoone ſpring, from the change to the firſt quarter.

To remoue Graffes, or young Trees, at the laſt quarter of the Moone.

Good to gelde or lode Cattle, in Sagittarius, Capricornus, or Piſces, the Moone encreaſing.

Of the Eclipse of the Moone.

The Moone this yeere shalbe Eclipsed the. xx. day of December, at. iii. of the clocke in the morning, and almost a quarter, she being then in her proper mantion Cancer, almost corporally conioyned with the malignant planet Saturne, and within two degrees of her Dragons head in the seconde house, the house of substaunce and riches: which what it may presage, I leaue it to others to discusse. My meanyng is not to vse long and tedious discourslng in a matter not very necessary, and familiar to euery one, consideryng the yeerely passions which happen to these great lyghtes: and therefore with prayer to God, to auert the euyll threatned thereby, I cease for this poynt.

The beginning of the foure *Quarters of this yeere:*

And fyrst of the Spring.

The Spring taketh his commencement and beginning the. xi. day of March, at two of the clocke. i. minutes after noone, at such tyme as the Sunne entreth into the first scruple of Aries, making the day and nyght then equall, and the æquinoctium vernum, whereby I gather that the yeere is lyke to proue indifferent fruiteful, and temperate, neither subiect to many stormes nor shewers, neyther hindered by too exceeding drought, so that there is no want, penurie, or scarcitie, by Gods permission to be feared.

Of the Sommer.

The Sommer beginneth the. xii. day of June, at. vi. of the clocke and. xxxvii. scruples in the forenoone, when the Sunne entreth into the fyrst minute of Cancer, making his solsticium æstiuum, longest day, and returneth againe Southward from whence he came. This season will proue some thing remisse in heate.

A Prognostication.

Of the Autumne.

The Autumne commenceth the. xiii. day of September, at. x. of the clocke. xiii. minutes at nyght, the Sunne entring the first scruple of Libra, the æquinoctiall signe, and now hastning towarde the Winter tropicke, describeth an equalitie betwixt nyght and day. This quarter wyll proue something colder then the nature thereof requireth, and more moyst then drie.

The Winter.

Winter beginneth the. xii. day of December this yeere, at iiii. of the clocke. xlv. minutes after noone, at the Sunnes first touching of the first scruple of Capricorne, his solstitium brumale, and winter Tropicke, making the shortest day and longest nyght: and endeth at the Sunnes entrance into Aries next folowyng. This quarter wylbe very colde, and kindly.

To know Sunne rising and setting.

Turne to the day of the moneth you desire to know, and if it be the. i. the. v. x. xv. xx. xxv. or. xxx. you may from your day looke towardes your right hand in a right line, and so vnder their titles finde them: but yf it be none of these dayes, then you must note what the difference is in minutes betweene the next day which is precisely put downe before your day, and also the next so set downe which foloweth, and thereof take such part, or from your day abate such part as the dayes encrease or decrease proportionally, wherein yf you borrow or reiect a minute or two, to make euen your accompt, it forceth not greatly: As for example. I desire to know the Sunnes rysing and setting the. iii. of Januarie, againſt which day I finde no numbers at all, wherfore according to my rule, I muſt looke for some day precedent, noted as here the first is, and lykewyse for some day folowyng, as is the. v. which done, I seeke the difference, and fynde it viii. and that I muſt vse proportionall subtraction, for that the numbers decrease: and therefore I say, yf the first day the Sunne rise at

viii. of the clocke and. iiii. minutes, that the. ii. it shal rise at. viii. and. iii. mn. and the. iii. at. viii. and. ii. minutes, and so my demande satisfied. Here you see that euery day looseth iust one minute, and that the difference falleth out mete with the dayes, notwithstandyng that it had beene a minute more, or lesse: as for example. iii. or. v. you might haue accompted. iii. or. v. iiii. at your pleasure, without any great errour, and so haue made the difference match to the number of dayes.

To finde the planetarie or artificiall houre vpon the day.

SEe how many howers, your houre of the clocke is from Sunrysing, and multiplie these houres by. 60. and diuide them by the quantitie of your artificiall howr agreeable to the day, and the quotient sheweth how many artificiall howers and minutes of an other artificiall howr (if there be any annexed) be past: wherefore adde one to the number of howers found, & that is the howr required.

Example.

I would know the first of Januarie what Planet reigned at. iii. of the clocke in the after noone: I therefore abate. viii. of the clocke iiii. minutes, which is the Sunne ryse from. vi. howers. o. min (for so is iii. of the clocke to be reckoned, that is to say, the after noone howrs are to be added to. xii and then Sunrysing to be abated) and so there remayneth. vi howers. lvi. which are vi. houres lvi. minutes. Now the howrs brought to minutes by multiplication of. 60. are 360. vnto which adde. 56. the minutes which are besides your howrs, and so wyll the Sunne amount to. 416 which diuided by. 39. minutes and. 20. seconds (for so you must vnderstande the quantitie of the artificiall howr to be set downe in min. and seconds) yeeldeth the tenth howr: whereby you may conclude, that the tenth Planet, that is to say ♄. by course reckoned from the planet of the day, is the planet which then hath finished his course, and that the planet that is next in order folowyng hath begunne his course, and then reigneth for that howr and tyme. Adde therfore one vnitie to your number. 10. found, and enter the table folowyng, and so shall you finde Saturne reigning. If you finde in the quotient howers and minutes, they shewe so many

howers past, and so many minutes more of another artificiall howre next folowyng: yea of that howre which your vnitie added, and the rest altogeather sheweth. Note, as often as you cannot diuide your distance brought into minutes by the planetarie howre reduced to secondes, you must multiple it agayne by. 60. and so bryng it into secondes, as in the last example is done. Furthermore, yf your day proposed haue neyther numbers of Sunne rising, nor quantitie of planetarie howre, you must do for both, as you were taught to do for the Sunne rising, and then procede with your rule last rehearsed.

The Table seruing to finde the planetarie hower vpon the day, where the first colume conteyning the figures 1. 2. 3. 4. and so to. 12. standeth for the number of howers, the next colume for Sunday, the thyrde for Munday. &c.

1	☉	☽	♂	☿	♃	♀	♄

10	☿	♃	♀	♄	☉	☽	♂
11	☽	♂	☿	♃	♀	♄	☉
12	♄	☉	☽	♂	☿	♃	♀

To know the planetarie hower for the nyght.

ABate the quantite of your planetarie hower of that day from 120. minutes, and the remayne sheweth the quantitie of the artificiall hower for the nyght: which founde, proceede as for the day, adding your howers after midnight to. 12. and so taking your distaunce betweene Sunne sette and your howers, by abatyng the hower and minute of sunne sette, from your tyme proposed, countyng sunne sette the beginning of the first planetarie hower for the nyght, and so successiuely, as this Table sheweth.

The Table for the nyght, where the lyke columes are referred to the lyke dayes of the weeke, as before.

1	♃	☿	♄	☉	☽	♂	♀
2	♂	♀	♃	☿	♄	☉	☽
3	☉	☽	♂	♀	♃	☿	♄

6	☽	♂	♀	♃	☿	♄	☉
7	♄	☉	☽	♂	♀	♃	☿
8	♃	☿	♄	☉	☽	♂	♀
9	♂	♀	♃	☿	♄	☉	☽
10	☉	☽	♂	♀	♃	☿	♄
11	☿	♄	☉	☽	♂	♀	♃
12	♀	♃	☿	♄	☉	☽	♂

A Prognostication.

To know at what hower of the clocke such a Planet reigneth.

But yf you desire to knowe at what hower of the clocke such a Planette beginneth his reigne, then multiply the quantitie of the planetarie hower, by one lesse then the number of the planetarie hower, whether it be. 1. 2. 3. 4. 5. 6. 7. 8. 9. 10. 11. 12. or any number vnder. 13. because there are but. 12 howers for the day, and so many for the nyght, and diuide the product by 60. yf the diuidente be minuts, or els by. 3600 if secondes: and the quotient sheweth your desire: if any thing remaine, they are minutes, besides the howers of the clocke: which howers and minutes founde in the quotient, adde to sunryse, yf it be for the day, or to Sunset, yf for the night, and so haue you your purpose. Example. For the same day aboue rehearsed, I woulde knowe when the. 4. planet, that is ♄. reigned: Wherefore I multiplie. 39. min. 20. secondes by. 3 and diuide by. 3600. and thereof commeth. 2. howers of the clocke. 20. minutes, and. 20 secondes, which added to. 8. howers and. 4. minutes, being sunryse, bringeth. 10. of the clocke. 24. minutes, and 20. secondes, when the. 4. Planet began his reigne.
